

Start crafty from a terminal (e.g. inside a terminal emulator) or from a shell script with a custom command line that launches crafty. The following files are included in the download: crafty, appdata.xml, crafty.ini. Credits: @DeathHoldsVengeance - Main developer. Crafty is heavily based on his viewer project, which can be found at: @KovacsPelagic - Baked normal maps and baked lightmaps for all models, as well as lightmap baking support. @DarkVanilla - Original Half-Life.bsp (baked) support. @ChaosTheory - Original Half-Life.mdl (baked) support. @StephanBabic - Original Half-Life.map support. @mmasif - Original Half-Life.rmf support. Permissions: • You can redistribute the.zip file (and possibly all the files inside), as long as you don't charge any kind of money for the software. You can also modify it. You can't change the.app bundle without modifying the.app bundle. Donations: • If you want to donate something, you can buy me a Steam gift card. Crafty is targeted towards Half-Life modders and enthusiasts looking for a tool that is relatively user-friendly and should be able to open.mdl and.bsp files without too many problems. I've always wanted to create a fast and reliable open-source viewer and I hope I've succeeded with this project. It should be straightforward to open.map,.bsp and.mdl files. Crafty does not include a lot of features compared to other viewers. It's meant to be the simplest and fastest tool for quick previews, while still remaining feature-rich and future-proof. I've also added a lot of logic to deal with the bloat that can be found in most viewers. This means there are quite a lot of bugs, but this also means that I can have the time to polish up the engine a bit. Crafty includes the following features: • fast-render mode to increase performance • binarized texture support (for.mdl files) • direct lighting support (for.mdl files) • lightmap support for.mdl and.vmf files • support for 70238732e0
