maligai saman list in tamil pdf A: Could you try a regular
expression to replace each of the characters in the string using
this pattern `\pL\pL`. `\pL\pL` match a character in the Unicode
category "Letter". You can find more on Unicode here. Q:
How to escape a string in verilog I have verilog string data
being passed to me from a C file. I would like to escape the
string in my verilog program. I saw in a book that one way of
doing it is to replace each `\` by `0xf`. I tried this on a simple case
and it did not work: `module my_string(id); integer id; wire
[8:0] foo = 'B'; initial begin id = 5'b0f; // 0xf == 0x9 in bin
$display ("test id : %b",id); $write(foo); //unexpected "B" end
endmodule` I also tried replacing the `\` with a zero and
everything else, but to no avail. What am I doing wrong? I
would like to avoid a wide string if possible. A: `\0` in C is the
equivalent of `\x0` in Verilog. You need to use `#define` to
replace your `\` with `0xf`. `module my_string(id); integer id; wire
[8:0] foo = 'B'; initial begin id = 5'b0f; // 0xf == 0x9 in bin
$display ("test id : %b",id); #define escape(x) #x
$write(escape(foo)); //prints "X0F" end endmodule`
