More than half of members of Congress support a constitutional amendment to overturn the Supreme Court's same-sex marriage decision, according to a poll released Monday. The poll, released by the political data firm Public Opinion Strategies, found that 54 percent of members of Congress support a constitutional amendment to overturn the high court's landmark decision in June, while 22 percent oppose it. ADVERTISEMENT The poll found that support for such an amendment was evenly split among Republicans and Democrats, while 69 percent of members of Congress said that the decision to redefine marriage should be up to individual states. The poll was conducted on behalf of "Alliance for Marriage," which is led by the Alliance Defense Fund, an organization that opposed the court's decision and has advocated for a constitutional amendment. The poll also found that a majority of members of Congress disagreed with the court's decision to uphold ObamaCare. Sixty-seven percent of respondents said that Congress should overturn the court's decision, while 26 percent said it should uphold the law. The survey was conducted among 548 adults who identified themselves as members of Congress between Dec. 4 and Dec. 5. The poll comes as the Supreme Court considers challenges to the federal healthcare law, which features requirements for individuals to buy health insurance and offers subsidies to help with the costs. Supporters of the law have argued that the individual mandates and the subsidies are constitutional and that the law will help prevent a national healthcare crisis. Opponents, led by states and conservative groups, have argued that the law is unconstitutional and will drive up healthcare costs. Eclipse is an open source integrated development environment (IDE) primarily designed for Java development. It uses an integrated suite of tools for source code editing, debugging, testing, building, deploying, and maintaining a project. The Eclipse IDE includes a model based development tool (model editor) that can be used to develop business process, enterprise systems, and in other systems with a design-oriented model. The Eclipse IDE was originally designed to run on the Java 2 platform. However, there are additional development tools available to accommodate other programming languages. Eclipse was first released as version 1.0 in October 2002. It has come a long way since then, both in terms of the number of available features and the number of Eclipse releases. As of February 2009, there have been 10 releases of the Eclipse IDE. One of the first releases of Eclipse is generally considered to be version 1.0.1. Two versions are currently supported: Eclipse 3.2 and Eclipse 3.4. According to the Eclipse Version History for Eclipse 3.2.x and Eclipse 3.4.x, Eclipse 3.2.x is supported through Eclipse 3.2.2 and Eclipse 3.4.x is supported through Eclipse 3.4.2. Eclipse was originally forked from the Java Developer Tools project (JDK). This project was later sold to Sun Microsystems, who allowed the Eclipse project to continue to develop. The Eclipse project, in turn, had numerous contributors. Eclipse is a very powerful and complex product. For that reason, it is often used by professional Java developers as their primary IDE or even as a multi-language IDE, and it is also one of the most widely-used open source products. Eclipse is available for multiple platforms, including Linux, OS X, and Windows. Although you can install the product on multiple platforms simultaneously, you cannot run Eclipse on the same system on more than one computer simultaneously. As of March 2012, the latest Eclipse release is Eclipse Helios. It uses Java EE 6 as well as the CDT Eclipse Java development tool for embedded development. Features: Eclipse is generally considered to be a full-featured Java IDE (Integrated Development Environment). The name refers to the fact that it contains all of the tools and capabilities that a Java programmer needs to develop an application. Eclipse also includes a Modeling and Navigation Framework that makes the Java development process more user-friendly. Starting with Eclipse 3.2, it can be extended with plugins 1d6a3396d6
