

ListCD is a light CD-player, based on cdparanoia, designed to enter track names on CDs. When a track name is entered, it is remembered for future use. ListCD remembers the track list and will use it the next time you insert the disc. The disk-alignment and the scaling of the track list is done automatically. This way, it is impossible to forget to set a loop-point, since ListCD will detect the appropriate length for your cd-player's disk-alignment and scale it automatically. ListCD uses a user-defined key-stroke list, rather than a predefined track list for the automatic loading. ListCD Features: ListCD is a light CD player, based on cdparanoia, designed to enter track names on CDs. When a track name is entered, it is remembered for future use. ListCD remembers the track list and will use it the next time you insert the disc. The disk-alignment and the scaling of the track list is done automatically. This way, it is impossible to forget to set a loop-point, since ListCD will detect the appropriate length for your cd-player's disk-alignment and scale it automatically. ListCD uses a user-defined key-stroke list, rather than a predefined track list for the automatic loading. ListCD can play the cd directly from the disk or it can use the track list to buffer tracks into its buffer and play them at a slower speed. The trick is, that the program always plays tracks at the CD-speed, so that you can still see the previous track when ListCD tries to pause the disc. ListCD can use the tracks in any order, in this manner, it always remembers which tracks you listened to last. ListCD remembers the track list, and will use it the next time you insert the disk. ListCD can play a mixture of CDs and other audio-files, without the need to re-enter the track list. ListCD supports CDs of many different players, the standard play-speed can be set to any speed between 1.7x and 5x and it will scale it automatically to the highest of those. The CD-player will remain unscaled, but play at the chosen speed. ListCD will use the key-stroke list to buffer tracks, making it easy to type in your track list and adjust it, before the disc is played. ListCD will not interfere with any of your

Two-Way: We support a "fully interactive" keyboard that lets you enter comments, etc. Jogwheel: "Mouse wheel" scroll, allows you to move the item or jump to any other item On Screen:...there are various On Screen functions. You can jump to any position (left, right, top, bottom), change the voice, change the voice mode, and skip to the next song or jump to a different song. MIDI Mode: Playlist Mode: This mode allows you to create a playlist of tracks and quickly navigate to the next/previous track from a list. Track List Mode: This mode supports the standard track list functionality and lets you jump to any entry in the list. Current State: Shows the comments and track name of the current song. Can jump to any track in the list. Can jump to any item in the track list. Can use any item in the track list. Can create playlists of songs. Back Story: When SmoothCD was first designed, we were aiming at people that wanted to listen to music on the desktop. Later on, with the development of mobile devices, we made a few adjustments to the product to make it work on those devices too. The main goal was to have a simple product that was easy to use and didn't bog you down with unnecessary features. We never really intended for the product to become what it is today. We got a bit ahead of ourselves and when we started talking about the big features, it got to the point that it became difficult to keep the product simple. Over time, people that were using our product started asking for some features that we never really intended for the product to have. We added a couple of extra features in the process that turned out to be unnecessary and detracted from the original design goal. Because of this, we decided to remove them. We were able to take some of the best ideas from the extras and integrate them back into the product. The only feature that we consider to be a must-have is the "fully interactive" keyboard. We apologize for any inconvenience that this may have caused. Future Plans: As we work on new versions of the product, we will be making plans to add new features. In the future, we plan on adding CDDb support, higher quality graphics, a multi-disc player 77a5ca646e

ListCD is a smooth CD player which will let you enter track names on a CD. Once this information has been entered, it is remembered and the next time you insert the disc, it automatically detects and fetches the track list. Sometime in the future, it will also be able to fetch lists over the Internet from CDDB so that you don't have to type in the entire list if someone else had already done so. ListCD Homepage: ListCD Features: * CD List -> search online CD lists * CD Search -> search up to 25 CD lists * CD name -> rename CD's (new name) * CD Menu -> CD Info, CD Player, CD Browser * CD Info -> read and edit CD Information (ID3) * CD Player -> adjust settings for the CD and display information * CD Browser -> browse up to 100 CDs * 2.5 and 4.25 inch floppy disks are supported You can compile ListCD for Windows 98/Me/2000/XP and from this you can create batch scripts. ListCD can also be compiled for Windows CE. If you do not want to compile ListCD from scratch, you can download the project files (zip archive) from HINT: if you compile ListCD for Windows 98/Me/2000/XP, the version compiled for Windows 2000 is compatible with Windows XP. For the new version of ListCD, we've integrated the new CDDB (CD Database) into ListCD and thus started a new major version of ListCD. ListCD 2.9.1 Features: CDDB: CD Database - integrated and independent (no longer depends on CDDB from freepascal) Support of over 1000 CDDBs Automatic update of CDDB databases New database search mode Improved search behaviour Various bugfixes ListCD 2.9.1 Support: ListCD 2.9.1 supports a lot of hardware, but not all devices are yet supported. Some devices (e.g. Sony CDs) are detected automatically. Other devices are detected if you enter the manufacturer and the ID of the device in the first fields of the CD's device info screen. Warning: in the ListCD GUI, the program name "ListCD" is not displayed as "ListCD", but as "

What's New In ListCD?

A convenient GUI CD player for JWM. Works with both Windows and Linux. With Google CDDB and Internet search data, it also serves as a CD browser. It can remember the track names and playlists and even browse CDDB and internet music databases directly. It can be used as an audio player, allowing playback of WAV and MP3 files. Notes: This CD player was initially written for Sounder, a program to help you sort your MP3 collection. If Sounder does not work for you, then it is highly recommended that you check out It can play MP3s, including tags, and will search online music databases like CDDB and Internet Music Archive. If Sounder does work for you, then get a copy of the program and try it out. Bugs: Actually there are several bugs with this player. As I am fixing them, I will make updates to the program, so please report any bugs that you find. The bugs listed in this README file are the most significant ones and I do plan to fix them in the near future. Other information: To enable the search database, you can download this data from Google CDDB. Once installed, you can select 'check CDDB' in the CCDB utility to enable the search database. The CDDB search will be switched to use Google if the CDDB server is down. To change this behavior, edit the ``config.cddb.stub.lookup_google_url`` configuration variable. The CDDB search allows you to specify a search scope, either "tracks only", "albums only", or "artist only". Also, you can limit searches to specific languages. To change any of these options, edit the ``config.cddb.stub.lookup_settings`` configuration variable. When Google CDDB is down, it will fall back to musicbrain

System Requirements For ListCD:

- 2GB or more RAM - NVIDIA GeForce GTX 1050 or AMD Radeon RX 460 Graphics Card with at least 2GB VRAM - Intel i3 or AMD Ryzen 3 2.0 GHz - 16GB of available hard drive space - Dual-Core processor - Windows 7, 8, 8.1, or 10 64-bit Edition - Internet connection required to download the free version of the game NOTE: Graphics settings can be adjusted in the Options Menu. Our customers also love our other licensed games on Steam
