{Upload Your File Here} Medical Laboratory Management And Supervision By Lionel A Varnadoe Rtf Online Reading Online Ebook Free Google Fre Ebook For Mobile ., which is characteristic of an SSC, comprising the steps of: (a) coating a support with a light sensitive silver halide emulsion layer; (b) imagewise exposing said light-sensitive silver halide emulsion layer to form a latent image; and (c) developing said latent image to form a silver image, said silver image being transferred to an image-receiving element prior to separation of the silver halide emulsion layer from the support. The method of the present invention is particularly useful for the formation of color images, such as, for example, color proofs, transparencies, printing plates, color filters, color hard copies, color image displays, and color or black and white image forming apparatus, such as copiers, duplicators, printers, and facsimiles, utilizing dry silver and/or photothermographic materials. The term apparatus has been used to describe any device or system used for imaging, printing, duplicating, printing, duplicating or providing copies for, or the output of, a signal. The term lighting source has been used to describe any device or system that emits light, for example a lamp or other light source. Such apparatus or systems include but are not limited to a black and white copier, duplicator, printer or fax, a system that uses electronic or thermal scanning to reproduce or duplicate the image of a source document, such as a document camera, scanner or other device using silver halide photothermographic media or thermal media, a digital copier, a digital or laser facsimile, a combination of some or all of the above noted apparatus or systems, and a combination of a source document such as a scanner, document camera or the like with the above noted signal producing apparatus or system. Such apparatus or systems may be of any type now known or developed in the future, for example, but not limited to, electrophotographic, electrostatic, ionographic, magnetic, electrothermographic, and/or laser based. The present invention is further directed to a method of producing a photothermographic element comprising the steps of: (a) providing a phot
