The most widely used feature among the many Photoshop tools is the ability to apply layers. Layers are basically containers for editing that provide the ability to make certain objects or textures part of a larger image. Essentially you can build the illusion of a three-dimensional object from a two-dimensional surface. You can use all of the various tools in Photoshop to edit images, such as brushes, selection tools, masks, filters, retouching effects, and more. In this chapter we introduce you to the basic tools of Photoshop, such as layers and selections. And we help you get started as a Photoshop user and cover the basic editing techniques, such as cropping, resizing, and red-eye removal. You also find the other tools, such as filters and effects, throughout the book. Photoshop is a huge program, with several programs to choose from depending on your computer's specifications, available memory, how much you use Photoshop, and whether or not you plan to share your images online. The three main programs for Photoshop are Photoshop CS5, Photoshop Elements, and Photoshop Creative Suite 6. Unfortunately, this book doesn't provide detailed coverage for any of these programs. This chapter is specifically for Photoshop CS5 or other programs that are part of the Creative Suite. Congratulations, you're beginning to master the basics of Photoshop. You can begin using the program with some basic control over layers, selections, and other elements. You use them to separate different textures, move objects, add new elements, and apply various effects to an image. Setting Up a New Project Before you start, you need to create a new Photoshop project, and start using layers. To create a new project from an existing image, start the file from the homepage of this book by clicking the link 'www.PhotoshopForDummies.com' and opening the chapters in this book that relate to your topic. 1. Q: How do I retrieve the id generated by a transaction, in the user's browser? How do I retrieve the id generated by a transaction, in the user's browser? This is the simplest possible example I can think of. `var t = new web3.eth.Contract(require("truffle-contract").bytecode, "0x74e13f0e3b3eab62...").at(address); t.methods.create().send({from:user1, gas:20e23})` A: As far as I know, there is no way to retrieve the id generated by a transaction, in the user's browser. Any miner can see it. You can however use a web3 client to catch transactions in a given block and get the id of the transaction. Siegel (Brent). Even though Siegel has a predominantly German-American clientele, it's a fairly small club. We wanted to do the best that we could and get the highest quality linens. We're very happy with the results. We did a lot of research on different fabrics, and we found a material that we were really excited about. We brought the linens in, and everything was perfect. Siegel was able to give us really great advice on how we could enhance the look of the linens. We've been really happy with the Siegel Coneco linens. "It was important that we had a deep bench of designers. Our office usually only has two people—the chief designer and the head of marketing—which is fine, but they can only do so much. When we started having a lot of clients in, we knew we had to add more designers. I kept saying to myself, 'I can't believe we added two extra designers already.' With that kind of support, we're able to help all our clients. How does the design process work with Siegel? At Siegel, we have a huge board, so we can see at a glance the colors that all our clients are using. Most of our prints are based on color theory and color psychology. We also have several color books that we can access. We have a board that's full of swatches. When a client comes in and wants a particular design, we have a bin where they can just

Q: Non-equal sums of the squares of consecutive integers What are the complete list of rational numbers  $a$  such that there exist integers  $n$  and  $m$  such that  $a = \frac{n^2+m^2}{2}$ ? Is there a general formula for such numbers? Or are there infinitely many of them? A: As you said, the numbers are  $\frac{n^2+m^2}{2}$  and the factors of their denominator are the squares of the  $p$  of all the other solutions. Now, you can show that the factors are  $p$  or  $p^2$  or  $p^2q$  and so on. Reference intervals and diagnostic values of biomarkers in Japanese patients with bronchiolitis obliterans. To establish reference intervals and diagnostic values of biomarkers including high-sensitivity C-reactive protein (hs-CRP), retinol-binding protein 4 (RBP4), and pentraxin-3 (PTX3) in patients with bronchiolitis obliterans (BO) according to the stage of BO, based on the pathological diagnosis. Serum hs-CRP, RBP4, and PTX3 were quantified in 50 patients with BO (stage 1-4). Clinical features and laboratory data were examined to calculate reference intervals. The concentrations of these biomarkers in the peripheral blood of patients with BO were quantified by a fully automated enzyme-linked immunosorbent assay analyzer. We divided patients with BO into three groups: Stage 0, showing no BO changes (N=33); Stage 1, showing simple lymphoid hyperplasia (N=15); and Stage 2-4, showing eosinophilic infiltration, diffuse granulomatous changes or fibrosis in the small airways (N=2 or 3 for each stage). We also measured the concentrations of these biomarkers in the peripheral blood of 36 healthy volunteers. The reference intervals were hs-CRP 0.5-20mg/dL; RBP4 13-89ng/mL; and PTX3 1.7-9.7ng/mL. The concentrations of these biomarkers in the peripheral blood of patients with BO were generally within the reference intervals. The concentrations of RBP4 and PTX3 in patients with BO did not differ between different
