Yesterday we started reporting the shocking news that Samsung has announced the two, and only, new smartphones in its Galaxy lineup for 2014 -- the Galaxy Note 4 and Galaxy S5. And as expected, there was more to the news than just those two flagship smartphones. The two were announced together as they should be, as these two are the most important smartphones in the range. To those of you who are wondering what it means that the two are announced together, you will be glad to know that that is the preferred way to introduce a new product. But the two are just as important in the bigger scheme of things. They are both targeted towards different markets, and that's why we have decided to treat them separately. So let's start with the S5. Although it does not exactly break any records when it comes to hardware features, the Galaxy S5 is one of the most important smartphones of the year in terms of design. The smartphone has taken the world by storm, and if there was any doubts that the smartphone category was now completely dominated by Samsung, the Galaxy S5 should now put those doubts to rest. If the S5 was released a few months back, the smartphone would already be a huge hit. As for the specifications, the S5 features a 5.1-inch Full HD display, 3GB of RAM, an octa-core 64-bit processor, a 20.7-megapixel rear-facing camera with LED flash, a 3.5mm headphone jack, and a 4,000 mAh battery. The Galaxy S5 is available in two colors -- Black Orchid and White Pearl -- and also comes in two storage variants -- 32GB and 64GB. Of course, these specs aren't all that are important. The smartphone has its own design language, and that is what makes it so special. It has a metal frame
