A: A program of the same ilk as those mentioned in the question above, but perhaps with a different approach to MS Office. It may sound weird, but Yaraexcel.com is an Excel extractor that can work even with unformatted XLS files. The program has a pretty nice interface, and it includes Excel macros. The price is extremely reasonable, and it is a free trial version available too. An extra feature that Yaraexcel.com is that it can be used to convert a whole folder (with subfolders)

to a XLS file, if you only need to extract one or two files. In an internal combustion engine, a cylinder, crankcase, etc. become fouled with carbonaceous material such as soot, and these components, during engine operation, require periodic cleaning to restore their original performance. Normally, when the engine is removed from the vehicle and inspected, the cylinder and crankcase are cleaned. Such cleaning has been done by the engine operator himself by disassembling the engine, removing the engine's head, inspecting the cylinder, including its piston, etc. for the extent of fouling, using a machine tool such as a grinder or reaming machine to remove the fouling from the cylinder and its piston, and then reassembling the engine. In view of the above, it has been proposed to do the cleaning during engine assembly and before the engine is mounted on the vehicle.

According to this proposal, the engine is removed from the vehicle, inspected, and the piston is 1d6a3396d6
