If you want to know how your WiFi network performs, SpeedTest to the WiFi is one of the best tools you can download for free today. The speed test tool does just what the name suggests: it shows you how fast your router and the rest of your Internet connection is. The program can be configured to test either download or upload speed. This is a great tool for testing not only your home WiFi connection, but also your office or school network. You'll be able to view your average download and upload speeds by connecting to a public WiFi network, such as one at your local coffee shop or airport. With SpeedTest to the WiFi, you'll be able to get a definitive idea of how well your WiFi connection performs. Why is it good? For instance, you may be moving to a new town, and you want to know whether the Internet is going to be a problem, or if you're going to be able to stream video or play video games online. A bad Internet connection can make you feel like the village idiot, so it's very helpful to be able to test and see your Internet speeds. Another reason for having SpeedTest to the WiFi is to check and see whether a WiFi connection is working. You may want to see how fast the WiFi is at your hotel, where you're visiting your family, or at your home, if you're having an issue with your home WiFi. Sometimes, the problem with your WiFi connection is that it's not hardwired to your modem, and that's why it's a little slower than it should be. SpeedTest to the WiFi can test your Internet connection and let you know what you can expect. There are many instances in which the connection you thought you were getting from your ISP may not be the one you actually get, which may cause you to waste money. SpeedTest to the

A: You could install Airfoil (paid) or Superloop (free) and get the same result. If you are on iOS (just tested), it is a bit harder, you'd need a jailbreak. But I think on iOS too it is possible to do this, just don't remember it right now. Is Pre-Conception Care Worth It? The following is a guest post by Robert G. DeMarco, PhD, President and CEO of the American College of Obstetricians and Gynecologists (ACOG). Dr. DeMarco's opinion was solicited on this issue by the editors. It has been an exciting time in the healthcare sector. Since my arrival at ACOG in 2001, the attention has been directed to the primary care of women, especially through the College's efforts to address a wide range of women's health problems. One of the most notable features of this shift in attention is that a lot of attention is being given to women in their reproductive years. It's not only convenient, it's also more scientifically sound. Several studies have shown that the prevalence of chronic diseases, such as diabetes, obesity, and high blood pressure, increases significantly during this time period, as well as the increased risk for subsequent chronic diseases that can affect quality of life, such as heart disease, stroke, and certain cancers. In addition, pregnancies occurring in this period have been shown to be at an increased risk for both adverse birth outcomes and maternal mortality. The risk of miscarriage is 5 to 10 times higher than in women outside the reproductive years. Women also have a fivefold increase in the risk for peripartum infection and a 2.5-fold increase in the risk for stillbirth. The American College of Obstetricians and Gynecologists (ACOG) and other national and international medical associations have issued a wide range of guidance on both preconception and prenatal care for women of reproductive age. The guidance is intended to be the shared responsibility of both the health provider and the patient. However, it should be noted that the evidence that underlies this guidance is relatively weak. The "new" guidance, although written in relatively clear language, also appears to have no specific framework for providing it to a woman's health care provider. This means that the guideline will be interpreted in various ways. It is encouraging to hear that a significant number of primary care physicians are
