

Slavonic Fonts is a font collection designed to provide the proper set of fonts and tools for the creation of texts in some varieties of Slavonic. The software is provided with 38 native SVIP fonts and an additional 10 Unicode fonts, available for download and installation. In addition to that, the application also includes a library of over 100 unicode and nornic characters made available for use by text and composition tools. The fonts are licensed under the GNU General Public License version 2, the original software of the application is available as a free download from the vendor's website. Slavonic Fonts includes a bunch of basic tools such as an encoding table and a conversion utility, allowing you to seamlessly go from modern to old Slavonic, a multilingual dictionary, containing over 1500 words and over 800 verbs and nouns, as well as a language reference, featuring grammar and a few examples of usage. Calligri-6 is a specialized horizontal Arabic and Hebrew digitizing utility, featuring a word-by-word or character-by-character action. The utility allows you to see the letters, numbers and the word being scanned at the same time, while enabling you to select any letter or word of Arabic or Hebrew without needing to work with the whole sentence or text. The utility allows you to input Hebrew or Arabic text through using the keyboard or through pasting it on to a file or just printing out the data you have entered to a printer. When scanning Hebrew or Arabic text, the utility shows you the pronunciation at the same time, if you were to type in the text. Calligri-6 is supplied with two keyboards that feature 95 and 35 keys, respectively, for users to work with Hebrew and Arabic. The unicode set of characters included in Calligri-6 is Unicode 5.1 and the software includes a multitude of programming languages and editions of MS DOS, Windows, Mac OS X, and Linux. Calligri-6 is an open source project made available under the GNU General Public License version 2.0, which means that you can use and copy Calligri-6 for free. Calligri-6 provides a few basic tools such as dictionary, highlighting the words and choosing the text to be read, searching and the replacement of words, lists of 10, 20, 30, 40 and 50 most-common words. Calligri is a specialized Arabic and Hebrew digitizing utility, featuring a word-by-word or character-by

===== PISMO For Windows 10 Crack is an interesting and useful software solution that was designed to provide you with the means to write texts in old Slavonic, using several varieties of the language, while also allowing you to use diacritics, where required. The program is fairly simple to understand and work with, featuring a large window and a very basic interface. When launching the tool, you can select the 'Text Entry' type that you want to work with, from three distinct options, namely 'Traditional', 'Phonetic' and 'Glagolitic', whichever best suits your needs. After choosing the 'Text Entry', PISMO displays a virtual keyboard with the various Slavonic symbols assigned to a key on your computer keyboard. As such, you can simply press on the corresponding button or you can use your mouse and click on the characters you want to enter. At the same time, the application also allows you to import text from HTML or RTF format documents, useful particularly if you are dealing with larger texts and it would take you too long to enter them by hand. PISMO enables you to set the preferred font and its size or 'Lock' the screen, preventing any modifications from being made by mistake, while you are not paying attention or when you leave your desktop. The utility even features 'Diacritics' which you can access by clicking on the assigned button and selecting the item you want to enter. When you complete writing your text, you can export the created file to HTML or RTF, for further editing or printing. To summarize, PISMO is a useful application developed to offer language students or professors the proper tools to type messages or texts using the characters of old Slavonic church writings, with nothing but their PC and a regular keyboard or mouse. PISMO Description: ===== PISMO is an interesting and useful software solution that was designed to provide you with the means to write texts in old Slavonic, using several varieties of the language, while also allowing you to use diacritics, where required. The program is fairly simple to understand and work with, featuring a large window and a very basic interface. When launching the tool, you can select the 'Text Entry' type that you want to work with, from three distinct options, namely 'Traditional', 'Phonetic' and 'Glagolitic', whichever best suits your needs. After choosing the 'Text Entry', PISMO displays a virtual keyboard with the 6a5afdab4c

(Tabs are used for organization only) Main Features: 1. Support both Slavonic and Roman Hebrew (Old Testament) typesetting 2. Translate type and diacritics into the corresponding Latin alphabet 3. Enter text and correctly layout text and diacritics at the same time 4. Create and work with files in HTML or RTF 5. Import from RTF or HTML documents (text content) 6. Lock the screen to prevent manual modification 7. Set preferred fonts and sizes 8. To change language after launch select standard Russian or English 9. Support for US and other type sizes 10. Enter text to a specific word list (words in Cyrillic only) 11. Support for Bulgarian and Serbian languages 12. Automatic romanisation of Cyrillic text 13. Support for Romanian, Czech, Polish, Slovak, Estonian and Slovenian (Roman Hebrew) 14. Support for A and E vowel letters, accent marks, comma, preposition, hyphen, etc. 15. Support for transcribing Latin into Cyrillic. 16. Can be run in Windows XP, Windows 2000 or Windows NT 4.0 17. Use Microsoft.NET Framework 2.0 18. Handle multiple documents with a single run of PISMO. 19. Windows Interface 20. Creative-Comfort Global Fonts included. 21. System wide installation 22. Fast loading and 2x faster than other similar software 23. Simple to set up and use 24. Easy to save finished work as html or rtf 25. PISMO can also translate romanisation of Cyrillic to Latin (reverse) 26. All text is transcribed to Latin 27. You can use the original form of the words. 28. Easy to learn. 29.
