Simple, fast, free application that analyzes and corrects HTML tags. Does not require installation or updating of any database. The interface is in English, French, Italian, and German. Optimize HTML has the ability to format HTML and PHP code. With Optimize HTML, you can analyze and correct HTML tags and tags. The application does not modify the HTML code after optimization. Optimize HTML interface Optimize HTML is a portable application, designed to perform a number of functions. The software converts HTML, XHTML and XML code into a standard format, making it more readable and editable. The best way to get started is to open your HTML page in the program. There are several optimization options that can be selected in order to perform some changes in the source code. You can also look at a list of errors in the file. Another way to use the application is to change some options in the config file and then save it. This file contains the most commonly used settings in the software. It is not written to the Windows registry and won't modify your existing files. You can find the config file in the program's folder, located under [Program Files] directory. Interface Optimize HTML offers a simple interface, with a main window, and several tabs. In order to see the window, click the "Open" button in the main area of the application. The following are the tabs: Main window - Optimize HTML - Errors - Options Errors In this section, the application will list various errors in your code. If there are errors, they will be displayed in the main window. If you want to view the errors in more detail, select the file you wish to examine from the list of errors. Settings Here, you can change the various optimization settings. The settings in the options window are divided into sections, which are described below. General This option is used for modifying the default configuration file. If you want to save your changes, click the "Save" button in the settings window. The saved settings will appear in the config file. Character Encoding Here, you can specify the character encoding you wish to use. This is especially useful if you want to convert HTML files from Latin-1 to UTF-8 format. Input/Output Encoding This option has four options that you can use for HTML encoding. You can choose between the following options: - U.S. - U.S

Every feature of the program can be accessed by holding down the Alt key and pressing one of the F1-F12 keys. Update: 2012-04-18Q: Custom popover in android I am trying to customise the show and hide popover on touch. And i am having one button inside. I want to perform both the show and hide functions of the popover when user touches the button. Please find the below code. please help me if i am in the right track. A: The show/hide functionality is built into the PopUpMenu class. It uses the View class to make the menu visible. A: This tutorial helped me in a similar situation. Optimize HTML is an application designed to clean up your HTML source code to make it easier for reading and editing. It does this by modifying various HTML, XHTML and XML headers. Portable app with a rudimentary GUI There is no installation involved, so you can save the program files to a custom location on the disk or to a USB flash drive, in order to easily run the tool on any PC without previous setup. It doesn't modify the Windows registry settings. However, it auto-creates and updates a file with your settings. The interface looks unpolished, making it difficult to figure out how the options are structured. You can get started by opening an HTML file to preview the original and optimized source code as well as design. Syntax highlighting is supported. Load, preview and optimize webpages The HTML, XHTML and XML optimization options focus on fix-uri, enclose-text, escape-cdata, hide-comments, break-before-br, join-classes, numeric-entities, lower-literals, and uppercase-attributes, among many others. These are explained in a glossary section. It enables you to select the character, input and output encoding mode, along with doctype, as well as to wrap words. Moreover, you can preview PHP files if you have a PHP engine installed, or view the tidy configuration file settings. After optimization, Optimize HTML doesn't alter the original file but creates a new one in a predefined directory. Therefore, it's not necessary to create backups before using it. Evaluation and conclusion We haven't come across any problems in our tests, since Optimize HTML didn't freeze, crash or indicate errors. However, its interface needs a lot of work in the graphical department. We are also keeping in mind that it hasn't been updated for a while. Nevertheless, you can test it for yourself. ...for example, the html meta tags are parsed and the frames are cleaned up. The app also has an HTML5 / XHTML / XML validator and a Markdown parser to strip the HTML code. Key Features: ✓ No installation ✓ Supports HTML, XHTML, XML and Markdown ✓ Working with frames, tables and iframes ✓ Supported HTML version is HTML 5.1 ✓ HTML, XHTML, XML validator ✓ Supports XHTML 1.0 Strict, HTML 4.01,

What's New in the Optimize HTML?
