Compressing an audio signal results in lossy compression, such that audio signals compressed in this manner cannot be decoded and synthesized precisely to the original audio signals. The most commonly used audio coding method is the Advanced Audio Coding (AAC) method. AAC is a lossy compression method based on psychoacoustic modeling. Hence the usual intention of AAC is to reduce the perceptible quality of the decompressed audio signal, at the expense of lower bitrate compared to a stereo (left+right) signal coded at the same bitrate. This is achieved by using a fractional resolution technique and by adjusting a number of encoding parameters, such as frequency resolution, temporal resolution, frame length 648931e174
