\*\*The Photomerge Image Stabilizer feature doesn't work well with some images. So if you have a scenario where your image is rather shaky, and you want to retouch some edges or remove some shake in your image, then use the Select and Patch features. The Select command will select and remove the shake from your image, and you can use the Patch tool to edit the edges of your image.\*\* ## \*\*Chapter 7: Using the Artistic Features\*\* Photoshop has many tools for the artist, and one of the most helpful is the Eyedropper tool. This tool is an easy way to get the color of something right on the screen. The Brush tool is used to create and modify images on the Layers palette. This tool is a good way to create shapes and add texture to your images. You can also use the Brush tool to create designs using what are known as Spot Colors. You can even use a combination of the Brush and Spot Color tools to create spot color design effects. The Live Paint feature is a tool for creating and painting on your Photoshop canvas. You can use this tool to create your own background patterns, and to paint on the layers of your image. The Gradient tool allows you to modify the colors of a given image and apply that modified image to the canvas. This tool is most helpful for bringing out certain colors and fading the area around those colors. It's a good way to use Photoshop to create nearly any effect with your image. The Gradient tool can be very helpful when working with any sort of pattern on your image, or when trying to bring out any imperfections in an area of your image. The Gradient tool can be used to create a variety of patterns and shapes. The Gradient tool is the most used tool in Photoshop, and it is the easiest tool to learn. The Pencil tool is just that—a pencil. It is a great way to draw around and on an image and to create shadows with this tool. You can even use the Pencil tool with the Eraser tool to create some cool effects. The Gradient tool and the Pencil tool both work in the same way; however, they are very different tools with different controls. This chapter will help you become acquainted with the Pencil tool and the Eraser tool, which are really more drawing and painting tools than real tools. You can use the Gradient tool to modify the shadows and grad

Q: Python: how to write a function which replaces keywords in a string with the identity function? I'm working on a assignment where we are required to write a function which takes a string as an argument and returns a string with the strings in that string replaced with the identity function of that string (i.e. the identity function of "hello" is "hello"). The identity function of a string is like this one written: `def identity(x): return x` We have to be able to define one function using any of the following syntaxes: `def identity(x):` `def identity(x): return x` `identity(x)` Here are my questions: How do I implement that function? Should I use switch statement (with or without else)? How do I pass an argument to that function? I was thinking: `def identity(x, y):` `def identity(x, y): return x` `identity(x, y)` But then, it seems I'm returning without passing an argument, and I'm not sure if this is the correct way to do this in Python. Thanks in advance. A: You can create a dictionary for each string (name => value) that you need to use in the substitution process, and define a function that does the substitution (call it fn). For example: `function = dict({'a': 'assign', 'c': lambda x: 5, 'l': 'id'})` `def fn(x): k = function.get(x, x) return k()` `>>> fn('a')` assign `>>> fn('c')` 5 `>>> fn('l')` id  
ABSTRACT: In the Upper House of Parliament, the Senate, many senators come from small constituencies with populations of 40,000 or fewer. This is now the case for 57% of the Senate's members. This column argues that in today's socio-political environment, regional parties tend to get more elected in large constituencies than in smaller ones, because they are cheaper to mobilize in larger constituencies. As a result, the distribution of Senate members is becoming more proportional as the electoral constituencies become larger. This is bad news
