Photoshop Photoshop is a ubiquitous digital imaging application, and almost everyone has heard of it. Photoshop is a powerful and extremely sophisticated photo editing software, designed for professionals, graphic designers, web designers and other people interested in creating high-quality images. The new Adobe Photoshop launched last year, and from its name is clear that the image editing software was created by the two companies Adobe and it was not created by the community. Features Photoshop has a lot of features that will make you admire your work and save tons of time. This software is not as powerful as the version of the previous years, but you can edit your photos to the same level as professional photographers. The most important feature is the ability to import layers directly in the file. In addition, layers will be used by other tools, like the adjustment layers or the adjustment brush. The color gamut of the colors of the screen is based on cameras to monitor the color of the original data from the camera, and what is displayed on the screen will be based on the data they use when it is captured by the camera. Another great feature of the professional version is the selection tools. In the camera version of the tool is included only in the select tools. The application is based on Adobe's Lightroom and features for handling raw images, and improve them. The new Photoshop tool is good for a professional version, allowing you to customize the interface. The idea is to consolidate all the features and functions in a single interface that enables you to take the time to organize your work. Photoshop has more than 17.000 plugins in the Community. These include all kinds of effects and visual creative tools. If you work a lot with images, you will find the new Photoshop will make your work much easier. With all these features that can help you in your work.

Photoshop Elements lets you create and edit almost any kind of image. You can work with photos, adjust colors and contrast, repair shadows and other blemishes, retouch facial features, crop images, and make them more interesting by adding borders or frame. The features of Photoshop Elements are similar to those of Photoshop, but not exactly the same. Here are some of the most common Photoshop Elements tools: Elements works pretty much like Photoshop. For example, you can use the Rotate tool and the Move tool to move images around and rotate them, or you can crop, adjust levels, and sharpen images using the same tools you use in Photoshop. SketchUp is a free 3D modeling software that works like nothing else. It is quick to learn, and you can work with images while designing them. SketchUp is a great way to quickly create complex models of any size. You can add lights and materials to your model, and you can edit your models once they are complete. SketchUp's 3D modeling tools help you design a model that looks realistic. When the rendering process has finished, you can import an image of your model into Photoshop and use the Offset and Clipping options to duplicate the model over your background image. Or you can use the original background image for your final rendering. Photoshop Elements. If you don't have Adobe Photoshop, this is a great choice. You can work with images, edit them, or even add some layers, all with the same tools you use in Photoshop. SketchUp. For modelers who prefer 3D modeling software. SketchUp is free and offers a lot of flexibility and options. You can create models in SketchUp by importing existing images or designing them using the free online tool. The roles of individual and total body surface area radiation dosing in curative radiotherapy treatment in Wilms tumor patients. This retrospective study examined the dose distributions in the kidneys and other organs of nine children treated by curative irradiation for Wilms tumor. The kidneys received only a small fraction of the total irradiation dose; about 1% of the dose in each kidney. Within the kidney, there was a large variation in the dose received; the maximum dose of 40 Gy was given to a region deep in the renal pelvis and the mean dose given was 22.9 Gy. This figure was different in each kidney. The dose to the lungs, liver and other organs

Nir Bar Nir Bar () is a kibbutz in Israel. Located in the Jezreel Valley, it falls under the jurisdiction of Mateh Asher Regional Council. In it had a population of . Etymology The name is a double entendre: (Nir) "night", and (Bar) "a burning spark". Both have Biblical connotations. History The kibbutz was founded in 1980, on a plot of land purchased by 15 members of the Negev Brigade of the Israel Defense Forces. Two years after its founding it ran into financial difficulties, and found sponsorship from the Badis Shchayan Fund. It grew from an initial core of 13 families to 90 members.
