When the trial period is finished, the temporary file is automatically deleted, and you no longer have access to the files. What is the Difference Between an Image, a Selection and a Layer? Every image in Photoshop is the result of some kind of transformation, like painting, collage, retouching, etc. Every single transformation is stored in a layer. While it is easy to save, open, or compare any one of them, layers can be fused into the image: An image is like the canvas on which you paint. A selection is like a brush that helps you paint the canvas of your image. A layer is like the paint that you use to do the painting. If you replace the brushes, the paint, and so on, the results will be different, but the canvas, the selection and the layer will still be there. What does a Layer do? Layers are a useful tool for organizing a large number of image elements in a single document. Each layer is a container for its own elements, or "children". A layer is essentially a group of elements that you can copy, move, or resize, while keeping its "parts" separate. It's like a file folder, where you can store various files in different folders, and remove them separately. To be sure a Layer in your document is independent, simply click on the Layer's thumbnail to display a layer's unique properties. What is the Difference Between a Layer Stack and a Layer Group? A Layer Stack is the collection of layers. By adding or removing a layer, you make it a part of the stack. A Layer Group is the collection of all the layers in a document. You can add, change and manipulate the layers inside this group. For example, you can use the group to apply specific filters to a particular

layer. However, you can't add or remove layers inside it. The Components of an Image Photoshop can use various different components of an image. Most of the time you start with a document containing just one layer. This one layer is the image. GIMP doesn't use layers. For instance, when you draw on a canvas, you don't create a new layer for the image you're drawing on. You simply draw on the canvas, and the result is the image. In the "Duplicate Layer" dialog box, you'll notice a small plus sign next to the layer thumbnail. You can use this to create a copy of the current layer or to insert another new layer. The Gradient tool
